Material Design theme manual

Eduard Šubert

July 18, 2017

Material Design theme is a theme for Beamer inspired by Google's Material Design.

This manual only covers the theme itself, for more information on Material Design go to:
`https://material.io`

Setup

Setup is really easy: \usetheme{material}

Further you might want to customize the background with:

\useLightTheme or \useDarkTheme

and primary and accent colors.

There are some colors from the Material Design guidelines coded in. You access those by:

\usePrimary[Color] and \useAccent[Color]

Color ∈ { Red, Pink, Purple, Deep Purple, Indigo, Blue, Light Blue, Cyan, Teal, Green, Light Green, Lime, Yellow, Amber, Orange, Deep Orange, Brown, Grey, Blue Grey }

or you can pick your own:

\usePrimary{primary color, darker primary color, text color}
\useAccent{primary color, text color}

darker primary color is just darker version of primary color and text color is color of text on primary or accent colors.

All content should only appear in cards. There are several variants:

- plain card
- card with a title
- card with an image
- tiny card

plain card

```
\begin{card}
    [your content here]
\end{card}
```

Title

```
\begin{card}[Title]
    [your content here]
\end{card}
```

card with an image

\cardImg{file name}{width}

\begin{cardTiny}

[your content here]

\end{cardTiny}

Tiny card is useful for labels where too much whitespace gets in the way.

$$V(x) = \{y \in \mathbb{R}^n \,|\, \forall z \in P, z \neq x : \|y - x\| \leq \|y - z\|\}$$

left	center	right
1	2	3

Theorem (Pythagorean)

The sum of the areas of the two squares on the legs equals the area of the square on the hypotenuse.

Lastly it is possible to set image as a background for a frame:

\begin{frameImg}["height"]{file name}

   [your content here]

\end{frameImg}

Parameter `["height"]` determines the dimension that is stretched to cover the frame (`["width"]` is default).

Feel free to submit any issues you find on github:
